

Methodology: Knights of Columbus/Marist Poll of 1,408 National Adults

This national survey of 1,408 adults was conducted January 12th through January 13th, 2026, by the Marist Poll sponsored in partnership with the Knights of Columbus. Adults 18 years of age and older residing in the United States were contacted through a multi-mode design: By phone using live interviewers, by text, or online. All potential respondents were screened for age. The telephone sample was randomly selected from a stratified dual frame of landline and cell phone telephone numbers in the contiguous United States. For telephone surveys completed with live interviewers, household sampling was done by asking for the youngest male. The online sample was randomly selected from aggregated online panels by Cint. In online surveys, two attention check questions were asked that required the respondent to follow explicit directions. If respondents fail any data quality attention check question, these interviews conducted online are excluded from the sample and final analysis. Coding of any open-ended responses was done by a single human coder. Survey questions for all modes of data collection were available in English or Spanish. To ensure representativeness, data was balanced to match current estimates for the adult population by region, age, gender, education, income, and race/ethnicity using the U.S. Census Bureau's American Community Survey (ACS).

Results for all adults (n= 1,408) are statistically significant within ± 3.3 percentage points. Results for registered voters (n=1,222) are statistically significant within ± 3.5 percentage points. Margins of error for subgroups are available upon request. The design effect for this survey is 1.6 which has been incorporated in the calculation of all reported margins of error. Research limitations can come from many potential sources, and there may be unmeasured factors in this or any other public opinion poll.

Questions asked in this survey with the wording, results, and cross tabulations are included in this packet. Tables include results for subgroups to only display crosstabs with an acceptable sampling error. It should be noted that, although you may not see results listed for a certain group, it does not mean interviews were not completed with those individuals. It simply means the sample size is too small to report. The Marist Poll is an educational program in public opinion research and funded by Marist University.

Nature of the Sample

|------------------------------|--------------------------------------|---|--|-------------|
| | | A medication abortion is the use of a prescription pill or a series of pills taken to end a pregnancy. For the last several years, this medication has been available for purchase online in most states without requiring an in-person visit with a healthcare professional. Do you think for someone to receive these prescription medications: | | |

ABTINP1TRND. Knights of Columbus/Marist Poll National Trend**National Adults**

A medication abortion is the use of a prescription pill or a series of pills taken to end a pregnancy. For the last several years, this medication has been available for purchase online in most states without requiring an in-person visit with a healthcare professional. Do you think for someone to receive these prescription medications:

| | An in-person visit with a healthcare professional should be required | An in-person visit with a healthcare professional should not be required | Vol: Unsure |
|---------------|--|--|-------------|
| January 2026 | 59% | 40% | 1% |
| January 2025* | 63% | 36% | 2% |
| January 2024* | 61% | 38% | 1% |
